FinOps+

By **Kion**

A New Era of Accelerating Value

Cloud costs are rising rapidly, and traditional FinOps is no longer enough. As AI, SaaS, and multicloud adoption accelerate, complexity increases while visibility and control decline. Teams are expected to save more, move faster, and deliver greater value with fewer resources, all while struggling to connect cloud spend to business outcomes. Addressing these challenges calls for a next-generation approach.

Prevent Waste, Accelerate Decisions, and Scale Processes with Governance

FinOps+ integrates automated governance, AI-driven FinOps, and total technology spend management into one cohesive strategy. Move beyond traditional FinOps to meet today's demands with a more proactive and holistic solution.

With FinOps+, teams can:

Automate Governance: to prevent waste, reduce manual work, and create scalable processes.

Use AI-Driven FinOps: to drive agility, gain insights, and accelerate decisions.

Expand Beyond Public Cloud: to gain visibility and optimization across the entire technology landscape.

Introducing FinOps+:
Bringing you from Cost Control to Operational Excellence

FinOps+ redefines the way organizations approach cloud and technology spend by uniting financial accountability with operational performance. Built on three key pillars, Automated Governance, AI-Driven FinOps, and Beyond Public Cloud, the FinOps+ framework enables teams to proactively manage costs, streamline operations, and unlock greater business value. By bridging FinOps and CloudOps, it delivers unified visibility, holistic governance, and automation that transform cost management into continuous value creation.

Top FinOps Challenges
Here is what practitioners are trying to solve today and in the near future*
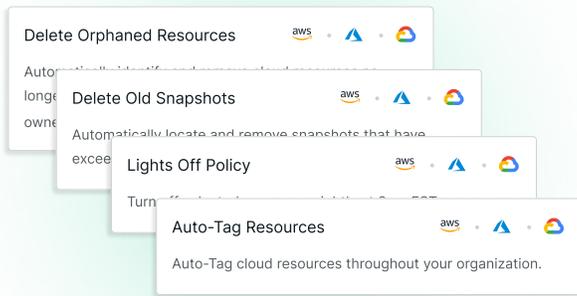

Current Priorities

1	Workload optimization and waste reduction
2	Full allocation of cloud spending
3	Accurate forecasting of spend

Future Priorities

1	FinOps governance and policy at scale
2	Workload optimization and waste reduction
3	Managing costs beyond public cloud

# FinOps+ In Action

Automated Governance: Policies combine with automation to create guardrails that enable proactive FinOps, maximizing savings and efficiency.

Beyond Public Cloud: Get unified visibility across your entire tech stack, holistic governance & optimization, and improved business decisions.

AI-Driven: AI tools and processes open a new door for value providing guidance, efficiency, and governance. Using AI within features or a Model Context Protocol (MCP) enables a FinOps practice to reach new levels of impact.

- Guidance: enhance usability to help users find what they need
- Efficiency: get information quicker and complete tasks faster
- Governance: leverage AI to assist in generating automated policies to prevent waste
