

Unified Multicloud FinOps Automation

ProsperOps and Kion help organizations consistently maximize cloud efficiency with intelligent FinOps automation across public cloud providers.

Comprehensive, Continuous, and Compliant FinOps Automation

Organizations are consuming more cloud resources today than ever before. Controlling costs can be challenging as more clouds, workloads, and users are added to the estate. Together, ProsperOps and Kion deliver a comprehensive solution for all phases of the FinOps Framework, helping organizations maximize the value of their cloud investments.

Inform

- ✓ Real-time view of cloud spend
- ✓ Intelligent showback and reporting
- ✓ Project-level budget allocation
- ✓ Cost anomaly detection

Optimize

- ✓ Automated commitment management
- ✓ Automated resource scheduling
- ✓ Synchronized rate and workload optimization
- ✓ Overprovisioned & idle resource detection

Operate

- ✓ Policy-based access
- ✓ Automated budget guardrails
- ✓ Built-in compliance checks
- ✓ Automated remediation

Automatically reduce your cloud spend and commitment risk with ProsperOps

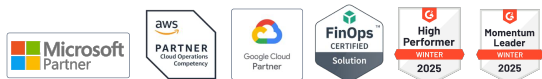

ProsperOps continuously manages discount commitments and engineering-defined workload schedules to reduce your cloud costs, mitigate financial lock-in risk, and eliminate manual optimization work. As a result, FinOps and engineering teams can focus on higher-priority work requiring human attention.

About ProsperOps

ProsperOps is the leading FinOps automation platform for cloud cost optimization on Amazon Web Services (AWS), Google Cloud, and Microsoft Azure. Eliminating waste and achieving cost-saving goals is challenging when cloud usage is elastic, but commitments are inelastic. Founded in 2018, ProsperOps reduces costs by synchronizing rate optimization with workload optimization, eliminating waste and boosting cross-team efficiency for FinOps. Our platform drives world-class Effective Savings Rates and mitigates Commitment Lock-In Risk for our customers

About Kion

Kion automates CloudOps with a single platform providing policy-based identity, FinOps, and compliance for multicloud infrastructure. Kion helps organizations achieve 'governance by default' through improved visibility, automation, guardrails, and guidance across multicloud environments. This helps enterprises reduce complexity, eliminate chaos, and minimize manual work so they can innovate faster with less risk. Wherever they are on their cloud journey, Kion empowers organizations to confidently provision accounts, maintain financial control, and ensure compliance with security regulations. Kion serves leading commercial, higher education, and government agencies including Indeed, Verizon, NASA, and the Centers for Disease Control and Prevention (CDC).
